

JEMIMO AI • BUILT IN INDIA

AI-native software, engineered to ship.

A product company that funds its products with senior-led AI consulting. Fixed-scope engagements you can start this week — and bespoke delivery when the scope earns it.

ORG DNA

Built by people who have done this before.

13+

years in data science & enterprise software

2

enterprise AI practices built 0 → 1

10+

production AI systems in under a year

50%

below agency — engineered, not discounted

Founded June 2025. Bootstrapped, with no outside capital. Our founder is a **data scientist** who led the Gen-AI Centre of Excellence at a **Big-4 consulting firm**, then stood up the AI practice from scratch at a **listed consulting and advisory firm**. Thirteen years of data science and engineering behind that — built inside global enterprises in payroll technology and business intelligence, where **production-ready was always the bar, not a demo**.

Twice built an enterprise AI practice from nothing. Now building cutting-edge AI for clients directly — enterprise-ready first, without the agency in between.

WHY ENGAGE US

Bootstrapped, by design.

We fund our own products by selectively taking on delivery work. That keeps every engagement principal-led and honest — never a billable-hour bench.

01

AI strategy & adoption

Where to bet, where not to — and how to actually run it.

02

Application building

Hands-on delivery of AI-native products and features.

03

AI-augmented delivery

Ship at AI velocity without surrendering judgment.

04

Cost benefit, by construction

An AI-augmented SDLC, milestone-based billing, and an India-based engineering footprint compound into a structural cost advantage.

05

Skin in the game

We consult to fund our products — not the other way round.

OUR OWN PRODUCTS

We run the model on ourselves.

The delivery model isn't a claim — it's what we build our own company with.

LAUNCHING SOON

An AI-powered intelligence engine that scouts emerging technologies, strips away the hype, and surfaces the signals that actually matter.

LAUNCHING SOON

Continuous Application Intelligence for Modern Software Teams

Plus roughly eight more internal systems — an ops command centre, a process-risk graph, MLOps lifecycle tooling — all built solo + AI in under a year.

You shipped fast. What slipped through?

Every release ships things you didn't see — a broken flow, a drifted feature, an open door. One scan finds all three, before your users do.

Regression

Checkout throws on Safari · one broken flow

Drift

Pricing page changed silently · two features

Security

File upload accepts unsigned types · one entry point

CONCEPTUALIZE • BUILD • SHIP

AI agents & MCP servers. Production-grade, not demos.

We work out where an agent is genuine leverage in your workflow, then build the thing, with the evaluation harness and guardrails that let it run unsupervised.

MCP server

One production Model Context Protocol server exposing your tools, APIs and data to Claude or any LLM — spec'd, built, documented.

Custom agent

An agent with real tool use, one integration, and a prompt and evaluation harness so you can tell when it regresses.

Agent system

Multi-agent, multi-tool systems deployed with guardrails and monitoring — the part most demos skip.

Claude-powered and BYOK-ready — your data stays in your own account. Fixed price, fixed scope; the ladder is published on our Fiverr listings.

START HERE

Start small. Expand when it earns it.

Fixed price, fixed scope, no discovery call required. Larger scopes are quoted directly — talk to the person who will actually do the work.
